\* Ichigo Green Infrastructure Investment Corporation (“Ichigo Green,” 9282)

May Ichigo and Ichigo Green solar and wind power generation was 22,194,014kWh, 9% below forecast due to the heavy rainfall across the country except in Hokkaido, a below-average number of productive daylight hours in eastern and western Japan, an increase in the suspension of renewable energy purchases in the areas covered by Shikoku Electric and Kyushu Electric, and taking the Ichigo Yonezawa Itaya ECO Power Plant offline as planned due to regular maintenance.

<sup>1</sup> CO2 reduction is calculated as 0.423kg CO2 per kWh, except for the Ichigo Nago Futami ECO Power Plant (owned by Ichigo Green) for which it is calculated as 0.694kg CO2 per kWh, using the adjusted CO2 emission factor disclosed by the Ministry of Environment on March 1 of each year as a fixed constant until February of the following year.

<sup>2</sup> Forecast power generation is a 50% probability mean annual production forecast (P50 forecast), calculated by an independent, third-party technical consulting firm, that serves as the base forecast for each solar and wind power plant's operating plan.

<sup>1</sup> FY25/2 CO2 reduction is calculated as 0.438kg CO2 per kWh, except for the Ichigo Nago Futami ECO Power Plant (owned by Ichigo Green) for which it is calculated as 0.672kg CO2 per kWh, using the Ministry of Environment's adjusted CO2 emission factor as of March 1, 2024.

Note: In addition to its own solar and wind power plants, Ichigo manages 15 renewable energy plants owned by Ichigo Green. Data for each of these Ichigo Green plants are disclosed in today's Ichigo Green release "Solar Power Generation & CO2 Reduction Data" at [www.ichigo-green.co.jp/en](http://www.ichigo-green.co.jp/en).

Ichigo discloses realtime solar and wind power production and CO2 reduction data for each Ichigo and Ichigo Green solar and wind power plant at [www.ichigo.gr.jp/en/business/sustainable/eco/plant](http://www.ichigo.gr.jp/en/business/sustainable/eco/plant).
