SpiderPlus & Co.

Major Update for "S+Report" Digital Forms Service

SpiderPlus&Co. will release a major update for S+Report, its digital forms service that integrates with the SPIDER+ site management service, beginning in November 2025.

This update provides seamless data integration with "SPIDER+" and improves performance for smoother site operations on an iPad. It also significantly streamlines the preparatory work required to use S+Report, such as the setup and configuration of form formats, which was previously a necessary step.
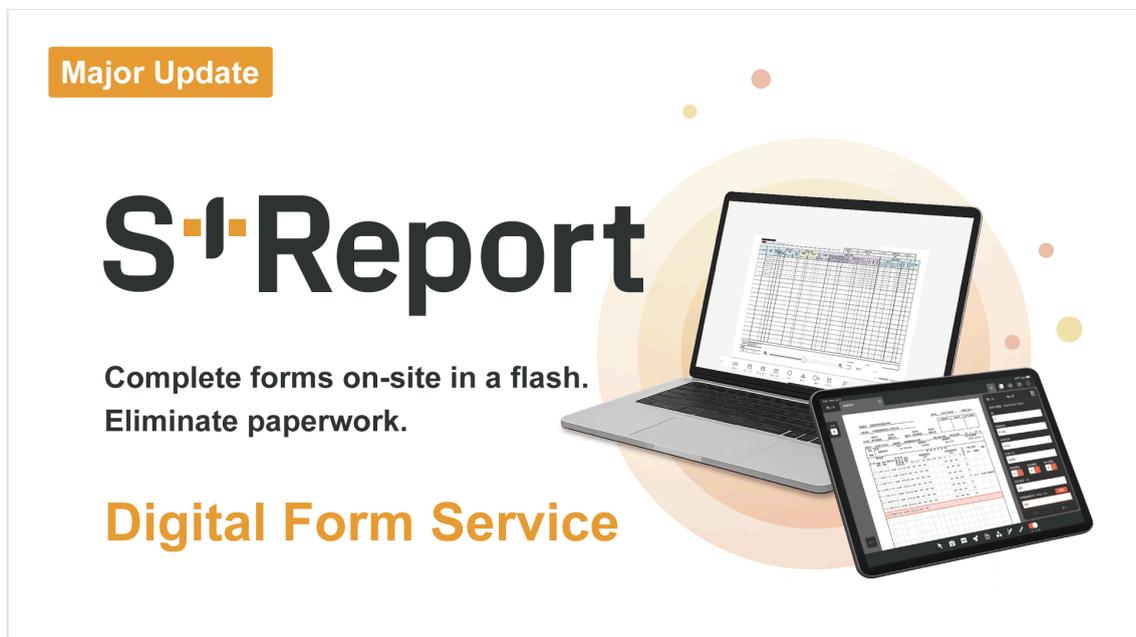

1. About S+Report

"S+Report" is a digital forms service that enables reporting and inspection tasks, traditionally done on paper or with spreadsheet software (like Excel), to be completed entirely on an iPad or PC.

It enables efficient reporting operations by allowing users to digitally replicate their familiar form layouts and centrally manage the entire workflow, from site data entry to form output.

Following its initial release in November 2023, we have comprehensively improved its features based on feedback from its use by construction companies, culminating in this major update.

2. Major Updates

（1）Achieved seamless integration with "SPIDER+"

Drawing information from "SPIDER+" is now instantly reflected in "S+Report." The licenses for "SPIDER+" and "S+Report" have also been unified, making the service available to customers

subscribing to specific plans.

（2）Significantly improved iPad performance, accelerating on-site task completion.

From form creation to data entry, sharing, and output—all completed at the site. This, combined with automatic measurement recording, allows reports to be finalized upon inspection completion.

（3）Significantly streamlines the preparatory work by automatically applying custom form formats.

Existing form layouts from various companies and projects can be automatically reflected in S+Report as-is. This significantly reduces burdensome preparatory work.

Please check this page for details.

3**. Outlook**

This major update is based on our mid-term product roadmap, "SPIDER+ Workspace," and aims to improve the digitization of fieldwork and strengthen data integration.

"S+Report" is designed to be more than just a replacement for traditional paper forms. It aims to become a platform for using stored report data across various job sites and organizations. By speeding up data sharing between "S+Report" and "SPIDER+", we will enable report-driven inspections and improve how work is done on site.

This feature has already been introduced at customer sites, and we have established a system to quickly incorporate specific feedback from the field into the product. Development is progressing toward further enhancement through an improvement cycle rooted in real-world operational use.

We will accelerate the evolution and introduction expansion of our products, starting with delivering tangible results at customer sites, to steadily advance digital transformation in construction sites.
