SecuAvail Launches "AI-SOC for Microsoft 365" — AI-Powered Security Operations Starting at Just JPY 50 per User/Month

SecuAvail Inc. (Headquarters: Kita-ku, Osaka; President & CEO: Masaomi Yoneima; TSE Growth: 3042; hereinafter "SecuAvail"), a company specializing in IT security, will launch "AI-SOC for Microsoft 365" on December 1.

Building on 25 years of experience providing SOC (Security Operations Center) services since its founding, SecuAvail has developed this new service by combining its extensive operational expertise with AI-powered log analysis technology developed by its group company, LogStare Inc. The new offering is specifically designed to support security operations for Microsoft 365.

In recent years, with the rise of remote work and other changes in work environments, the use of cloud-based services for business applications has become widespread across industries and company sizes. Office applications have also shifted from traditional on-premises products to Microsoft 365, a cloud-based service. With 1 TB of cloud storage per user, along with tools such as Teams and the latest Office applications, organizations are enhancing productivity through efficient file sharing and collaboration.

However, this transition has also introduced new risks. Misconfigured access permissions or optional settings in cloud storage may inadvertently allow unauthorized internal or external users to access confidential information. As a result, a growing number of IT administrators are struggling to manage security measures and incident responses that differ significantly from traditional on-premises environments.

To support IT administrators facing these challenges, SecuAvail will launch "AI-SOC for Microsoft 365" on December 1, 2025. This SOC (Security Operations Center) service utilizes AI to analyze Microsoft 365 audit logs, automatically detect high-risk security events, and send real-time alert notifications.

SecuAvail has incorporated its 25 years of expertise in log analysis and alert management into AI, enabling the detection and notification of potential threats such as account takeovers in Microsoft 365, intrusions from unauthorized external access, and possible information leaks caused by improper access permission settings.

【Service Overview Diagram】
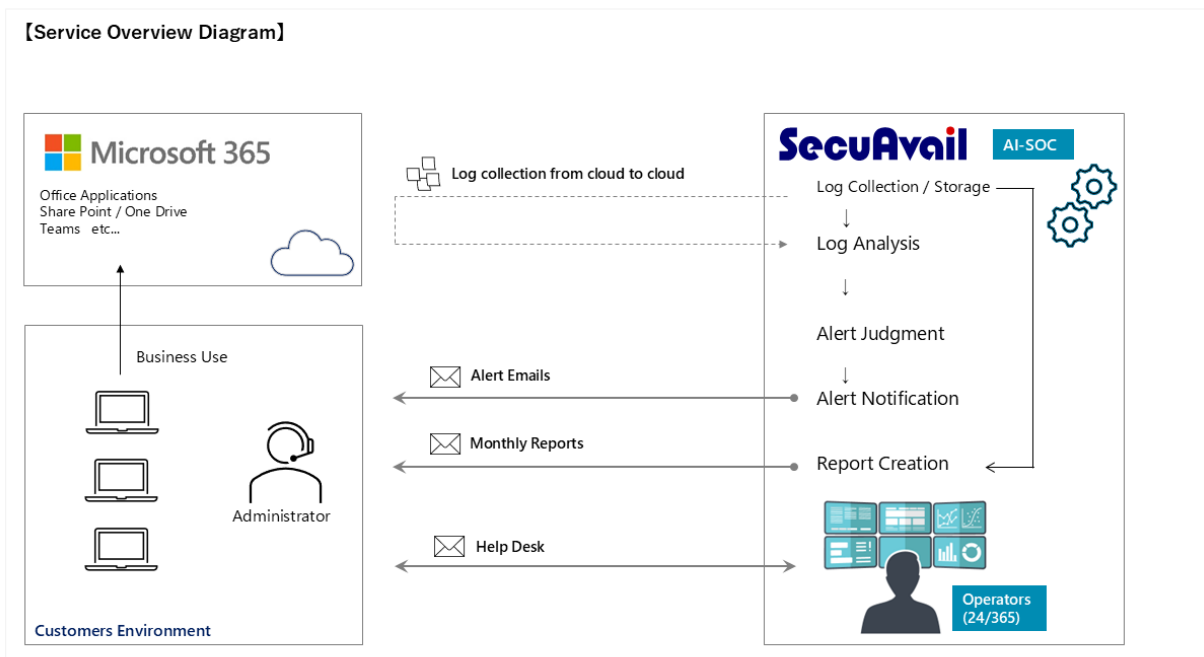

By leveraging SecuAvail's long-standing SOC (Security Operations Center) infrastructure and expertise, "AI-SOC for Microsoft 365" offers the following advantages:

1. Cost-effective service offering (¥50 per user per month)
2. Helpdesk support for alert handling
3. Log collection setup without any changes to user configurations (cloud-to-cloud log collection)
4. Log investigation portal (optional)
5. Long-term log storage (optional)
6. Log investigation, analysis, and advisory services (optional)

Leveraging its experience as a security service provider and the AI capabilities of its subsidiary-developed product, LogStare, SecuAvail offers the AI-SOC series at an affordable price, enabling organizations without dedicated IT security administrators to implement effective security measures.

About SecuAvail Inc.

Founded in 2001, SecuAvail Inc. is one of the few Japan-based companies exclusively dedicated to network security, offering long-term operational support for corporate and organizational information systems. To ensure robust system security and uninterrupted business continuity, the company provides services that are both highly secure and practically applicable.

For over two decades, SecuAvail has offered NetStare, an integrated security operations service that uniquely combines the capabilities of both a Security Operation Center (SOC) and a Network Operation Center (NOC). Through NetStare, the company monitors more than 11,000 client network devices in real time, collecting approximately 2.5 billion log entries per day. This enables rapid detection of equipment failures, communication outages, and cyberattacks—24 hours a day, 365 days a year.
