# note Launches "note pro MCP(β)"

## From Uploading Articles to Analysis, Just Ask ChatGPT or Claude

note has launched "note pro MCP(β)*," which connects ChatGPT and Claude with note. Just by asking the AI tools you already use, you can handle tasks involved in operating note, such as uploading articles and analyzing reader response. It is available to companies subscribed to "note pro," our advanced plan for corporations. There is no additional charge for using this feature.

To learn more about the benefits and features of note pro, see here: https://hubs.ly/Q04FMx_V0

*MCP (Model Context Protocol): A common standard that allows AI tools to interact with external services and data. Anthropic released it in 2024, and OpenAI and others have also adopted it.

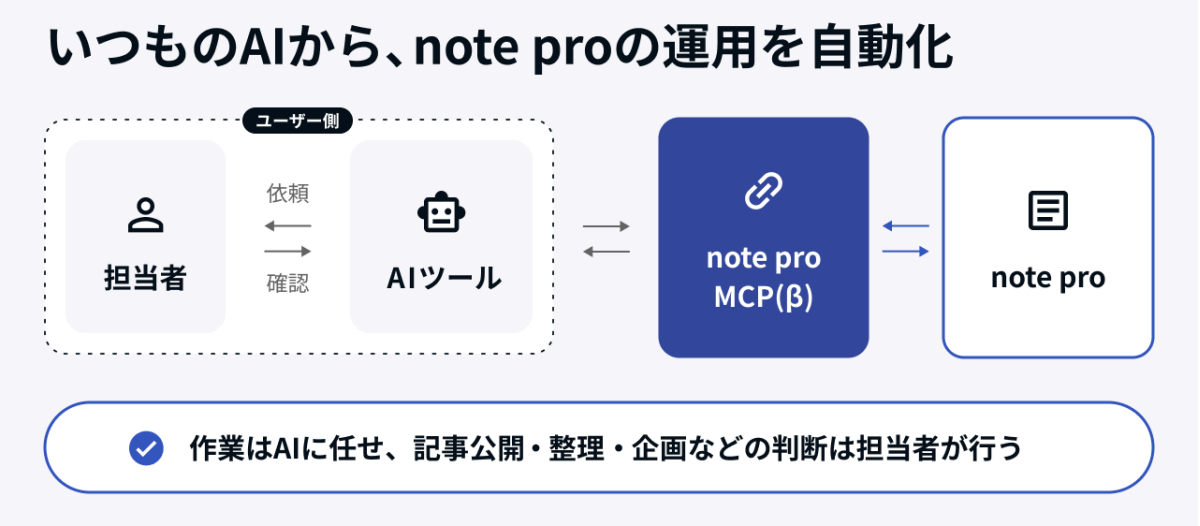

## People handle planning and gathering primary information, and AI tools handle operational tasks

When a company shares information, many operational tasks come with it beyond creating content, such as compiling and uploading manuscripts, and tallying and reporting on reader response. Companies using note pro have also told us, "We copy and paste the Word manuscripts we receive from employees one at a time," and "Monthly tallying and analysis take up our time, and we cannot get around to improving our articles." When there is only one person in charge, or that person also handles other duties, planning the next content inevitably gets put off, which becomes a reason companies cannot continue sharing information.

With the spread of generative AI, the amount of content on the internet is increasing greatly. In that environment, note believes that the content that reaches readers and leads to the goals of sharing information, such as recruitment and inquiries, is content based on primary information that only the people at that company have, such as experiences in the field and the process that led to a decision.

Planning, gathering primary information, and making the next improvements based on reader response. We developed note pro MCP(β) so that the people in charge can spend their time on these things.

*note pro MCP(β) prohibits actions such as automatically posting large numbers of articles without checking their content, and repeatedly posting articles with the same content. If we confirm such posts, we may take measures such as unpublishing or deleting the articles, or suspending use. For details, please refer to the help page below.
https://www.help-note.com/hc/ja/articles/64646253523609

## What you can do with note pro MCP(β)

**Turn the manuscripts you have on hand into drafts all at once**
You can create note drafts from manuscripts written in Microsoft Word, Google Docs, Notion, and other tools. Multiple manuscripts can be turned into drafts together in a single request, and inserting images and setting header images are also supported. Before publishing, the AI tool shows the articles to be published and asks for confirmation.

Example: "Turn each of the 8 attached Word manuscripts into a draft. Once they are created, give me the preview URLs."

**Finish organizing magazines in a single task**
You can add published or scheduled articles to magazines that you own or co-manage, or remove them from those magazines, all at once.

**Find past articles, then add links or revise them all at once**

From the articles you have published so far, you can find all those containing a specific word at once. You can add links to related articles, or rewrite words such as service names all at once. If you ask, you can also check a list of the target articles and the changes before anything is rewritten.

**Tally the figures for each article and create a summary for reporting**
You can list the page views, number of likes (Suki), and read-through rate for each article, and create a summary comparing them with the previous month.

Example: "List the page views and read-through rates of the articles published last month, and summarize what the articles that grew compared with the previous month have in common."

## Comments from companies that used it ahead of launch

**funlead corp. https://note.funlead.co.jp/**
A single operations staff member was able to turn about 8 Word manuscripts received from employees into drafts all at once. Access analysis can now also be done directly from AI, and the effort previously spent on browser operations and CSV downloads has been greatly reduced.

**GENOVA, Inc. https://note.com/genova_pr**
The work of uploading manuscripts to note one at a time now finishes in a few seconds, and even setting the featured images made in Canva is now completed on the same screen. For our first-half review materials as well, we were able to create a report summarizing note access analysis data with nearly a single instruction, and to understand the strengths of each article category.

## How to use note pro MCP(β)

- Companies subscribed to note pro can start using it by adding note pro MCP(β) on the settings screen of their AI tool, logging in to note, and authorizing the connection. In addition to the owner, members registered through member permission management can also use it (the scope of what they can do follows the permissions granted by the owner).
- No application to note is required. There is no additional charge for using note pro MCP(β), but the usage fees for your AI tool are required separately.
- The supported AI tools are Claude (claude.ai / Claude Desktop) and ChatGPT (desktop app). If your company has a contract for the AI tool, setup by an administrator may be required.
- For detailed setup instructions, please see the help page below.
  https://www.help-note.com/hc/ja/articles/64646461497881
- Operations related to paid articles and paid magazines are not supported.

To consult with us about introducing note pro or to request materials, please see the page below.
https://hubs.ly/Q04FMx_V0

Based on how everyone uses it and the feedback we receive, we will continue to add to what you can do with note pro MCP(β). Please write about how you use it in a note article and post it with the hashtag #noteproMCP. We may introduce the uses you post on the official note pro account.

## note

note is a media platform where creators post text, images, audio, and video, and users can enjoy and support that content. We value a safe atmosphere and diversity so that everyone can enjoy creating and keep going. Individuals and companies mix together, opening up more chances to find things you love and meet interesting people. The service launched in April 2014, and about 89.93 million works have been created. The number of members has reached 13.13 million (as of the end of August 2026).

## note pro

https://pro.lp-note.com/
note's advanced plan for corporations. It is a service that makes it easy to create owned media in the city of note, where many people gather, and to keep sharing information. Purposes vary, including "branding," "recruiting," "building fan communities," and "subscriptions." We provide extensive support for media operations and help companies connect with positive users and deepen their relationships.

## note inc.

Our mission is "Start, and Keep on Creating." We build systems for expression and creation. The media platform note supports all kinds of creative activities by creators. Creators publish content in their own way, receive support from fans and peers through Membership, shop and brand owners introduce products through Store, and companies and organizations share information using note pro.
